

Zomato Bangalore Dashboard - Problem Statement

Problem Statement

The restaurant industry in Bangalore is highly competitive, with thousands of restaurants offering different cuisines, pricing, and delivery services. Customers often struggle to identify the best restaurants based on ratings, reviews, cost, and service options such as takeaway and online delivery. Restaurant owners also need insights into customer preferences and market trends to improve business performance.

This Power BI dashboard analyzes the Bangalore Zomato dataset to uncover key insights into restaurant ratings, customer reviews, average cost, cuisine popularity, takeaway and delivery availability, and area-wise restaurant distribution. The dashboard enables users to compare restaurant performance, identify top-performing areas and cuisines, and make data-driven decisions.

Objectives

- Analyze restaurant distribution across Bangalore.
- Identify the highest-rated restaurants and cuisines.
- Compare dining and delivery ratings.
- Analyze customer reviews and engagement.
- Evaluate average cost across different areas.
- Understand takeaway and online delivery trends.
- Provide interactive insights for customers and restaurant owners.

Business Questions Answered

- Which areas have the highest-rated restaurants?
- Which cuisines are most popular?
- How does average cost vary across locations?
- Which restaurants receive the most customer reviews?
- Is there a difference between dining and delivery ratings?
- How many restaurants offer takeaway and online delivery?
- Which restaurants perform best overall.
